V.A. Khokhlov

Research Team

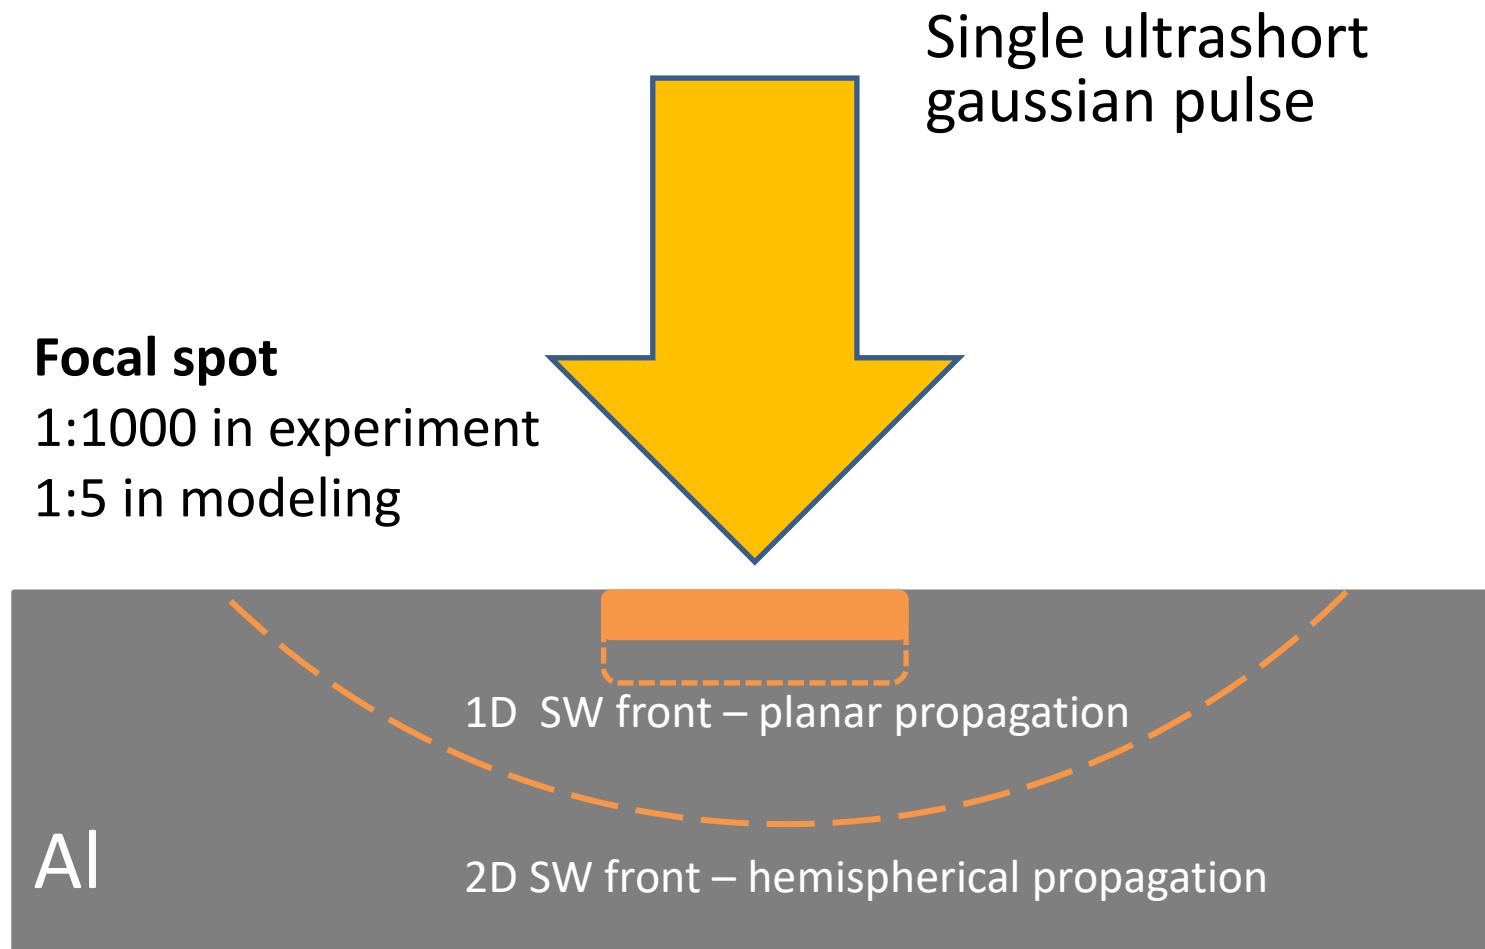

- S.V. Fortova, V.V. Shepelev, E.A. Perov (ICAD RAS)
- N.A. Inogamov, Yu.V. Petrov, V.A. Khokhlov (ITP RAS)
- V.V. Zhakhovskii (VNIIA)

Main Ultrashort Lasers Applications

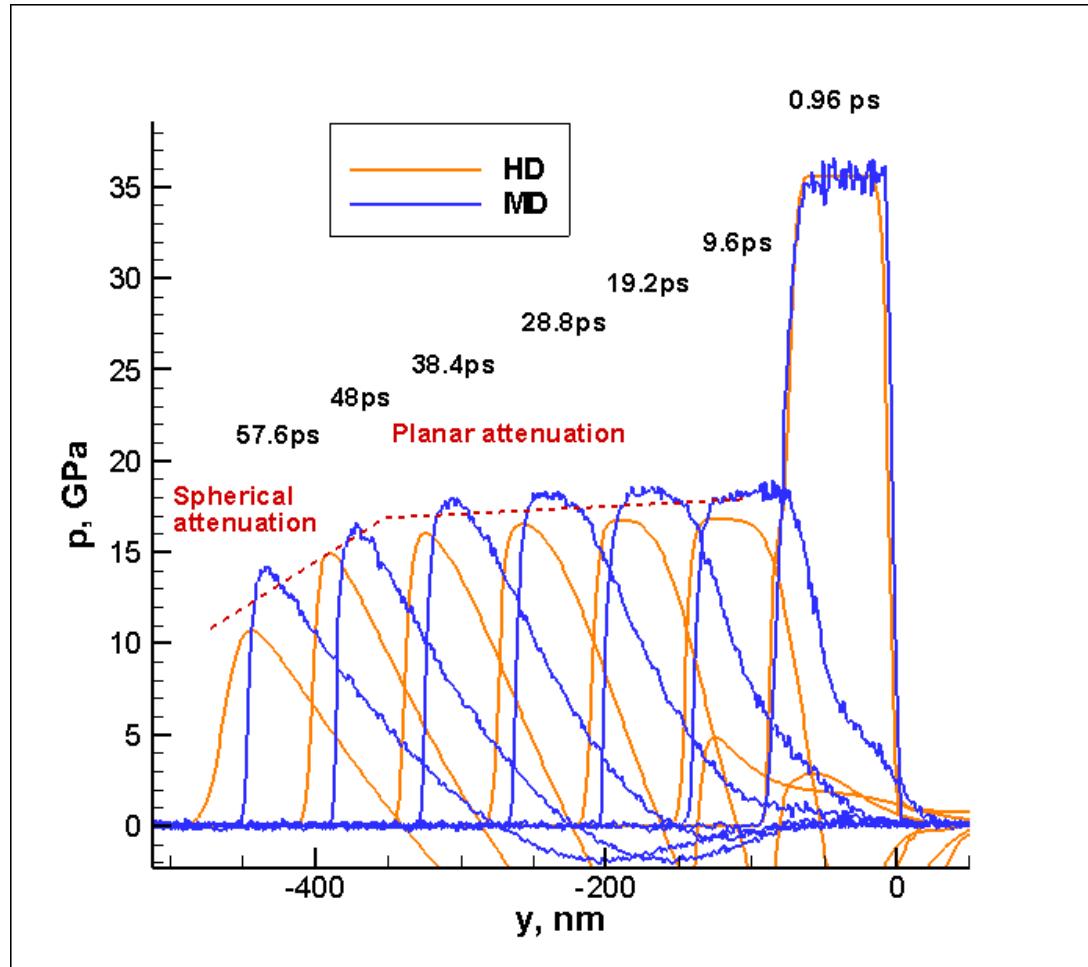

- New materials and nano-structuring
- Laser Ablation in Liquids (LAL)
- **Laser Shock Peening (LSP)**
- Additive technologies

LSP takes place due to nonlinear residual deformations after passage of a plastic shock wave which changes the state of the substance.

Single-pulse volume target irradiation problem

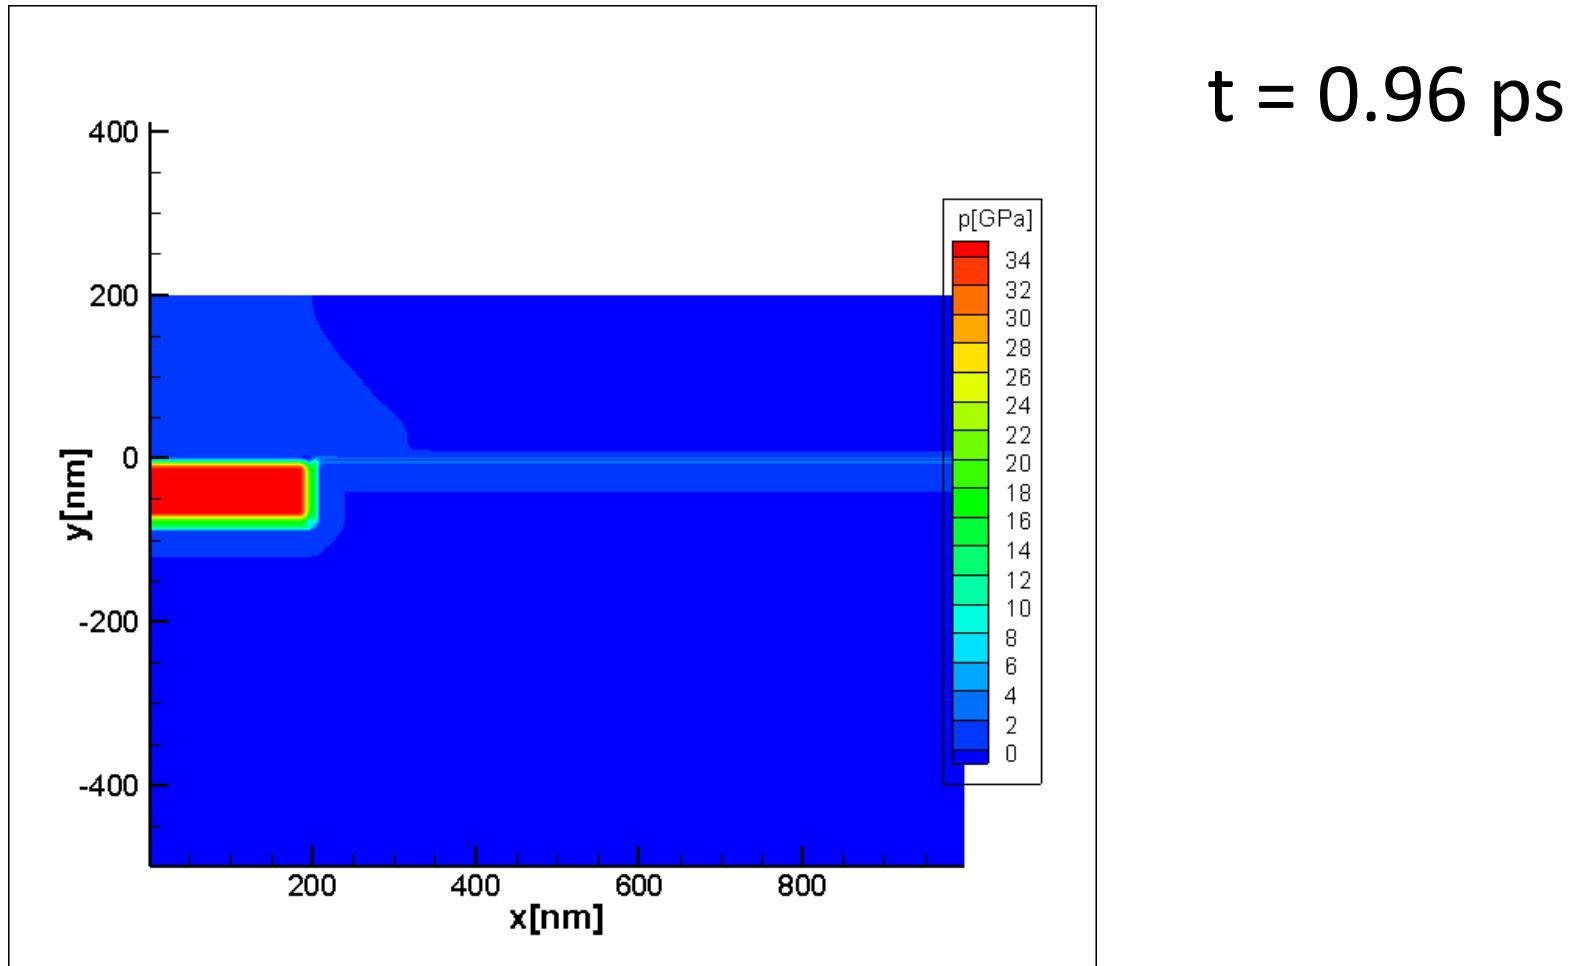

Results: MD and HD comparison

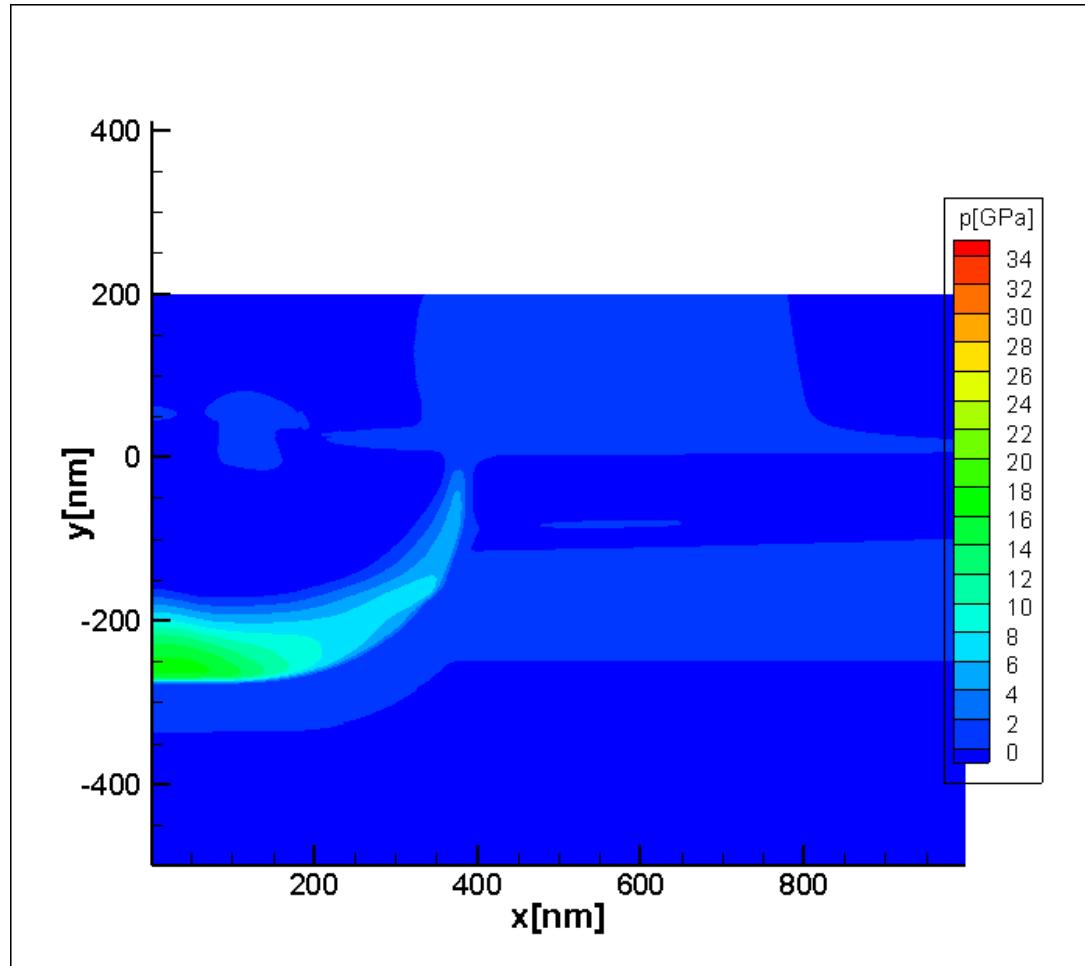

- $\sim 10\%$ mismatch in the fronts speed
- Attenuation mode change due to 1D-2D crossover

Results: Planar propagation mode

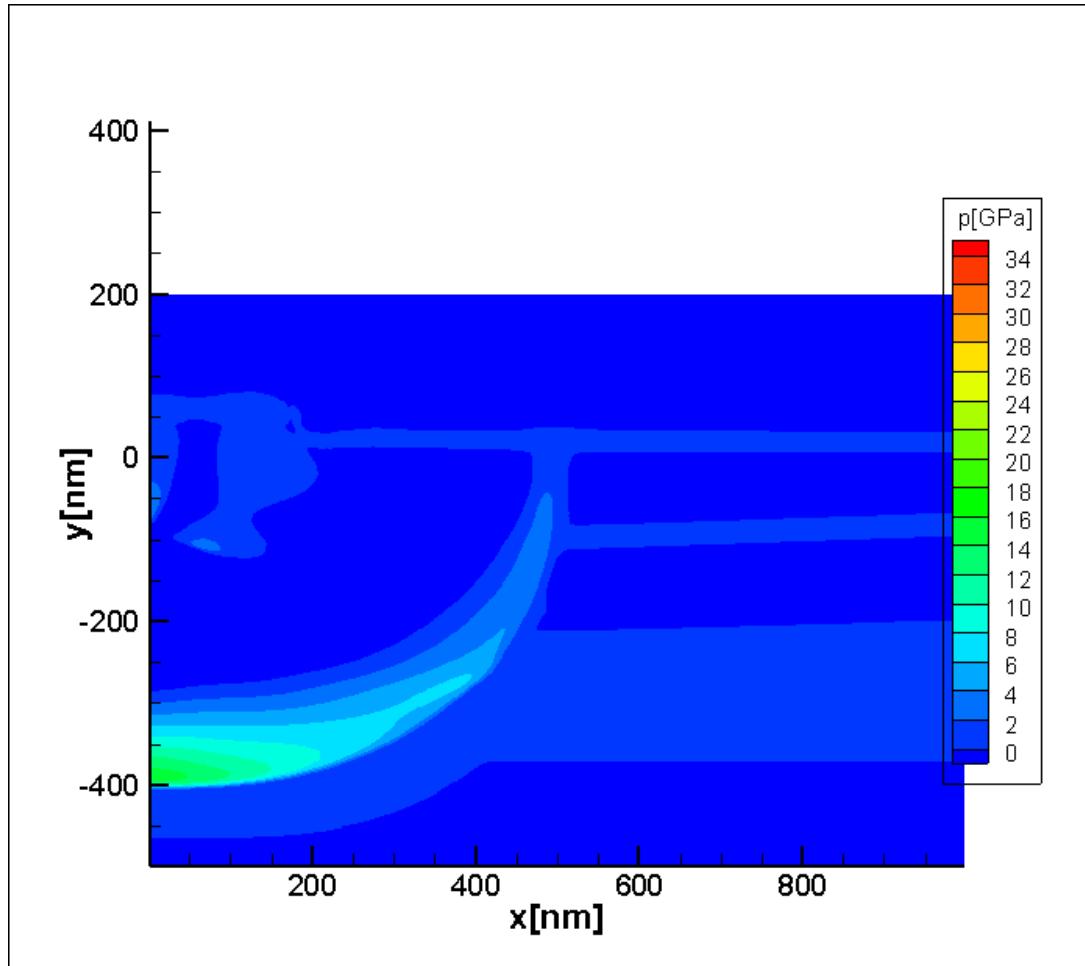

Results: Transition mode

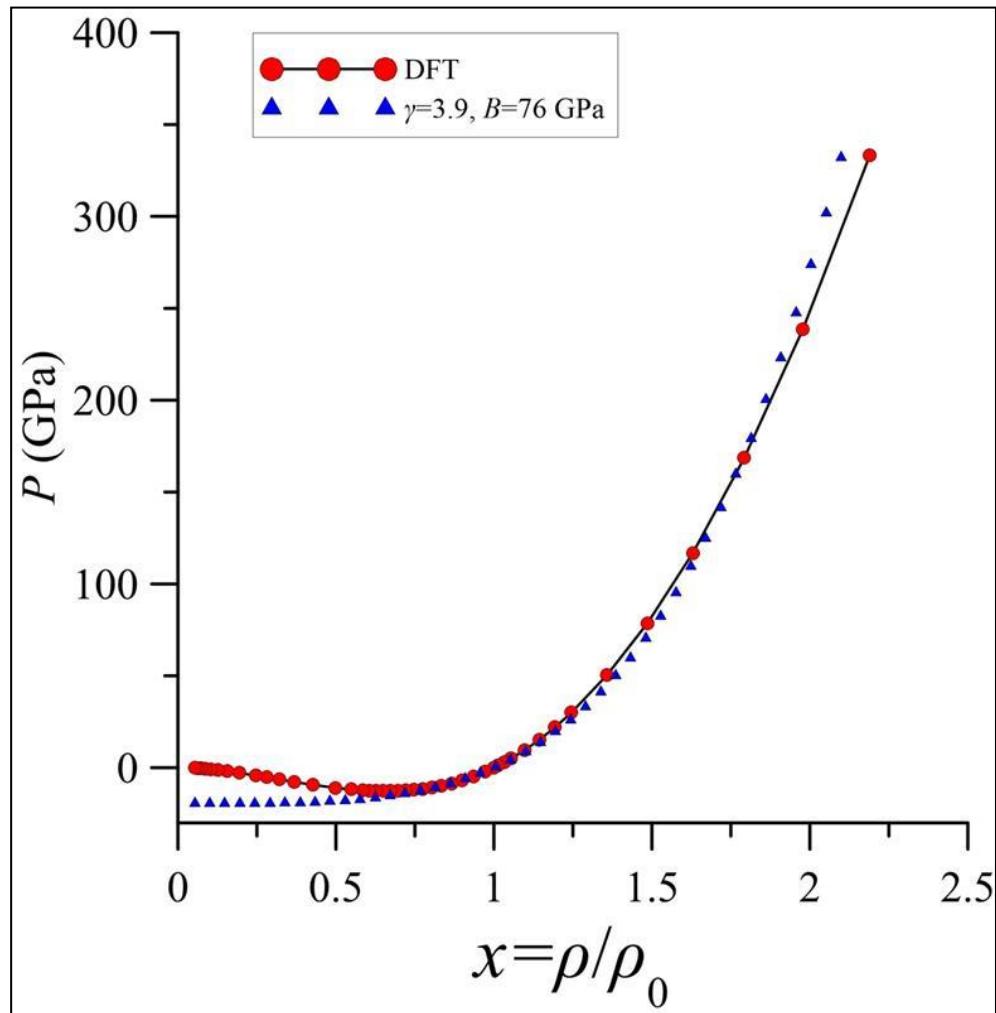

$t = 19.2 \text{ ps}$

Results: Hemispherical mode

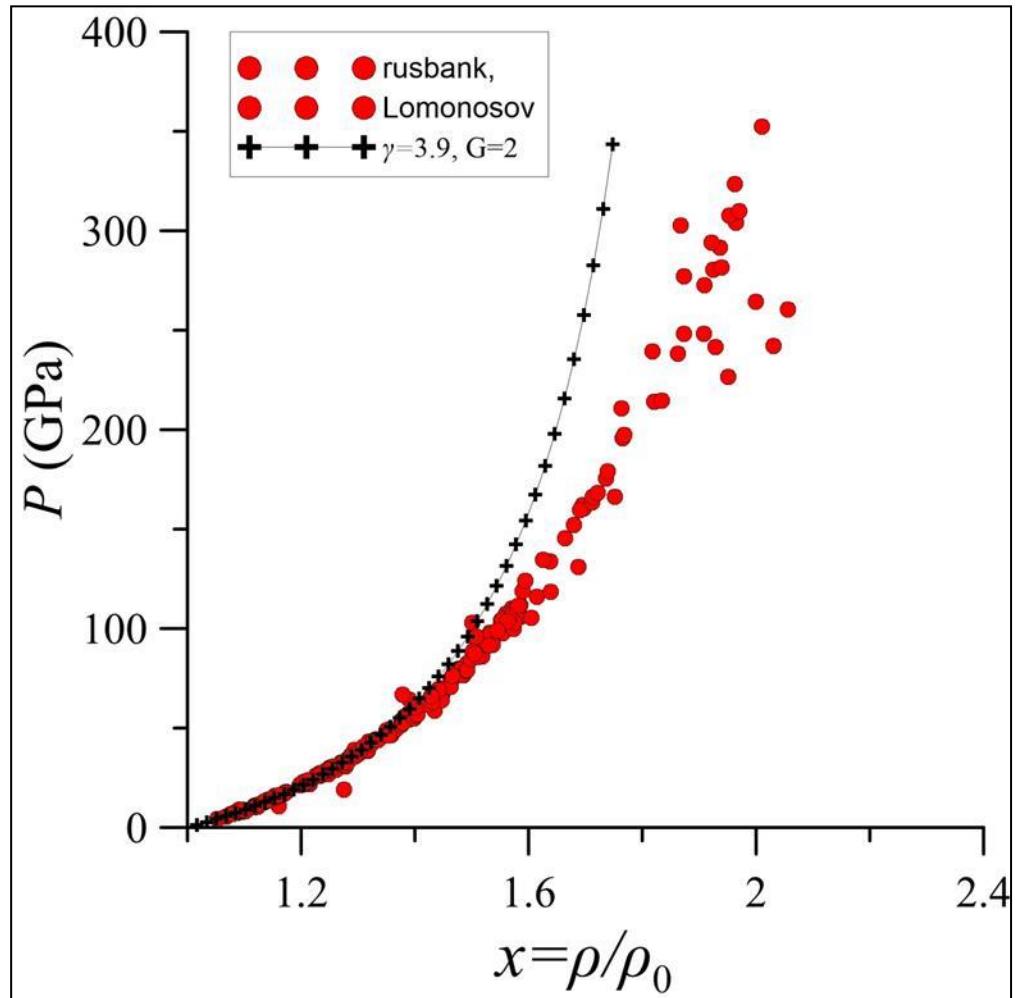

$t = 48$ ps

Mie-Gruneisen EOS Approximation

Cold curve

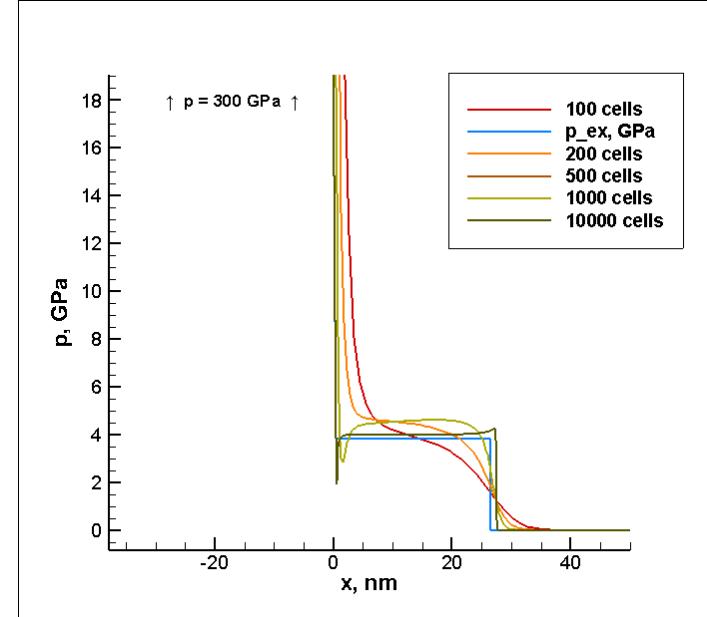

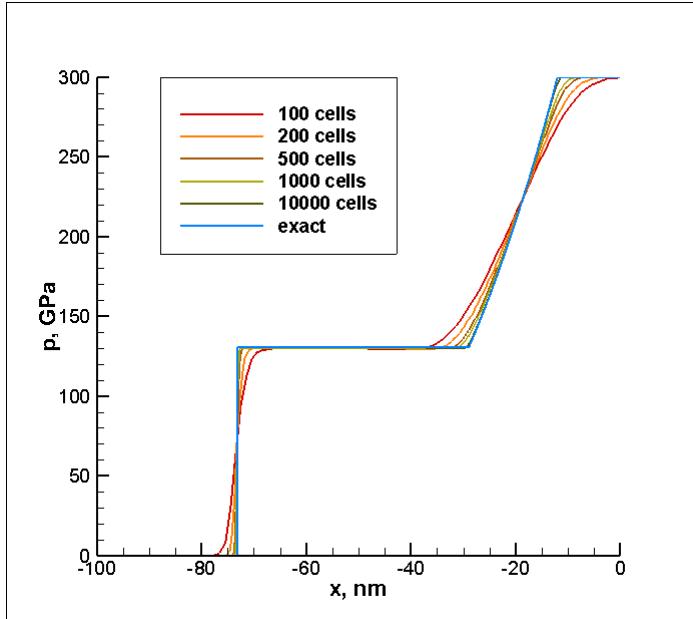

Mie-Gruneisen EOS Approximation

Shock Hugoniot

Hydrodynamic model and code

- 2D Euler equations (planar) + HLL + MUSCL-2
- Mie-Gruneisen EOS for Al
- Riemann problem convergence tests

The end
